To pick a book from Amazon Book's enormous mass of books can often be to pick a book out of a «whole lot of something»; you do not really know what you get if you not know anything about a book in advance. I did not know anything about this book before I bought it, but slowly by reading in it; it turned out to be a great positive surprise .

It do not take long time until you understand that the book is screwed together in a to complex way for one crafter/artist/author to make alone. And the explanation is that the author have 7-8 contributors as help with the texts and projects through the book as all have solid background in leather/jewelry making.

In general means leather jewelry a lot of decor, rivets, different kind of skin, styles and many both funny and interesting techniques to each project. It's a quite playfull art. And so is it with the project in this particular book as also have with a chapter about something called « Faux Bone», a poisen free PVC product as is ductile at 240-250 degrees. And by that is it a most interesting material , particular in leather/hide jewelery making.

All togheter have the book 98 pages. 14 of them only to introduce tools and equipment to make things with/ use in the workshop. And two pages in the end of the book as introduce the author and the contributors. As well there netaddress. Something as make it easy to take contact with the crafters/artists if it is something you wonder on. It is a kind of exstension of the content and a adaptation of it in a world where it can be fare between physical workshops to visit. It is a innovative features. Otherwise is it a book with a topic as fit to all levels of leather jewelry interest humans. It can be brought on: [www.amazonbook.com](http://www.amazonbook.com)
